

Bishal Patra

Product Manager | AI Product Builder

bishalp1407@gmail.com | +91 70022 48337 | [linkedin.com/in/bishal-patra-631264272](https://www.linkedin.com/in/bishal-patra-631264272)

PROFESSIONAL SUMMARY

Computer Science graduate transitioning into Product Management, with hands-on experience building and deploying an AI-powered product discovery MVP. Focused on problem discovery, customer feedback analysis, AI product workflows, prioritization, and translating ambiguous product problems into measurable, evidence-backed decisions.

FEATURED PROJECT

AI Product Discovery Engine — AI Product / Personal Project | 2026

Live MVP: ai-product-discovery-engine.vercel.app

- Built and deployed an AI-guided MVP that turns customer feedback from Google Play, Apple App Store, and YouTube into prioritized, evidence-backed product opportunities.
- Designed the end-to-end discovery workflow: multi-source ingestion → normalization and deduplication → LLM analysis → problem filtering → embeddings and semantic clustering → Reach × Impact × Confidence prioritization → supporting evidence.
- Implemented an asynchronous Sync Now workflow with persistent PostgreSQL job state, duplicate-job protection, stale-job recovery, and observable batch progress for long-running analysis.
- Calibrated a configurable 0.62 cosine-similarity threshold on the Blinkit validation dataset for the current embedding/clustering setup; treated it as an MVP default rather than a universal threshold.
- Built structured AI outputs covering customer problem, urgency, evidence, and affected user segment, while keeping deterministic processing and prioritization outside the LLM where appropriate.
- Used AI-assisted development for implementation, debugging, and refactoring while owning product framing, requirements, architecture decisions, evaluation, testing, and deployment.

PRODUCT MANAGEMENT FELLOWSHIP

Product Management Fellow — NextLeap | 2026–Present

Developing practical skills in product discovery, user research, product strategy, prioritization, and product case studies.

PRODUCT & AI SKILLS

Product: Problem Discovery, JTBD, User Research, Product Strategy, MVP Definition, Prioritization, KPI Thinking

AI Product: LLM Workflows, Prompt Design, Structured Outputs, Embeddings, Cosine Similarity, Semantic Clustering, AI Evaluation

Technical: Python, FastAPI, PostgreSQL, pgvector, SQLAlchemy, Alembic, Next.js, TypeScript, REST APIs, Git/GitHub

Deployment: Vercel, Railway, Neon, OpenRouter

EDUCATION

Bachelor of Technology — Computer Science & Engineering | Dibrugarh University Institute of Engineering and Technology | 2019–2023
